

Learning PartyCAD

PartyCAD comes with over 4 hours of help videos that display on your computer screen, and a slim manual to get you started. The manual contains installation instructions and basic tutorials on the program. In less than 2 hours, you will be able to design your own events using PartyCAD. After that, it will generally take less than 20 minutes to produce plans that will sell your design ideas and provide guidance to installers during setup.

Once you have mastered the basics, various online resources will complete your education. Everything you might need to know is available at the touch of a button. Don't know what a command on the screen does? Hold your mouse over it for a few seconds and a tool tip automatically appears. Need an in-depth explanation? Press the F1 key or click Help to get full details on any control or module. Want to become an expert at some aspect of the program? Watch an advanced help video, or read articles in the help for guidance.

If you ever have a problem that you cannot crack using the manual or the online resources, you can visit our web site at www.hufsoft.com for the latest information on PartyCAD. Or, give me a call. My name is Hank Hufnagel and I wrote the program. I will be surprised if, together, we can't solve any problem or answer any question you might have about PartyCAD.

Machine Requirements

PartyCAD requires a modern machine that runs Windows Vista or Windows XP well. PartyCAD ships on a CD, and so you must have a CD-ROM drive to install the software. Your computer must also be equipped with a sound board and speakers so you can hear the help videos.

Contents	Index
